- 1-20. (Canceled)
- 21. (Currently amended) A method for enhancing a human antigen presenting cell (APC)-mediated human cytotoxic T lymphocyte (CTL) response, comprising stimulating an APC with an agonist anti-CD40 antibody, or binding fragment thereof, wherein said anti-CD40 antibody or binding fragment is capable of blocking binding of CD40L on a human T lymphocyte to CD40 on a human APC by 16-88% and wherein said antibody synergistically enhances APC-mediated human CTL activation, and further wherein said antibody is capable of being produced by a hybridoma with American Type Culture Collection (ATCC) deposit designation PTA-2993, PTA-2994, PTA-2995, PTA-2996, PTA-2997, PTA-2998, or PTA-2999.
- 22. (Previously presented) The method of claim 31, wherein the antigen presenting cell is a monocyte derived dendritic cell.
- 23. (Canceled)
- 24. (Currently amended) The method of claim 31 or 32, wherein the monoclonal antibody is a chimeric, humanized, human, or a single chain antibody, or an antibody in which the potential T cell epitopes have been eliminated.
- 25-28. (Canceled)
- 29. (Previously presented) The method of claim 31, further comprising administering IFN-γ.
